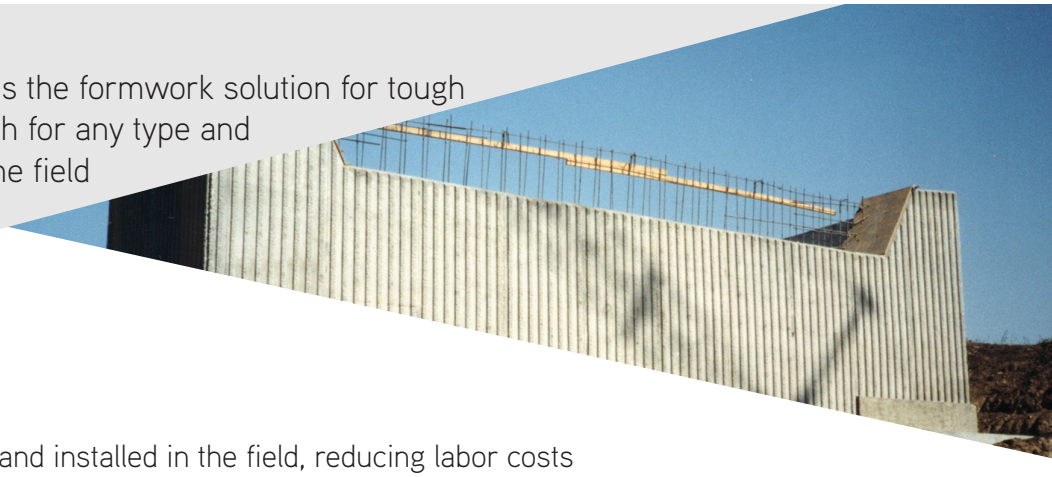
DAYTON® SUPERIOR

A110 Metal Rib

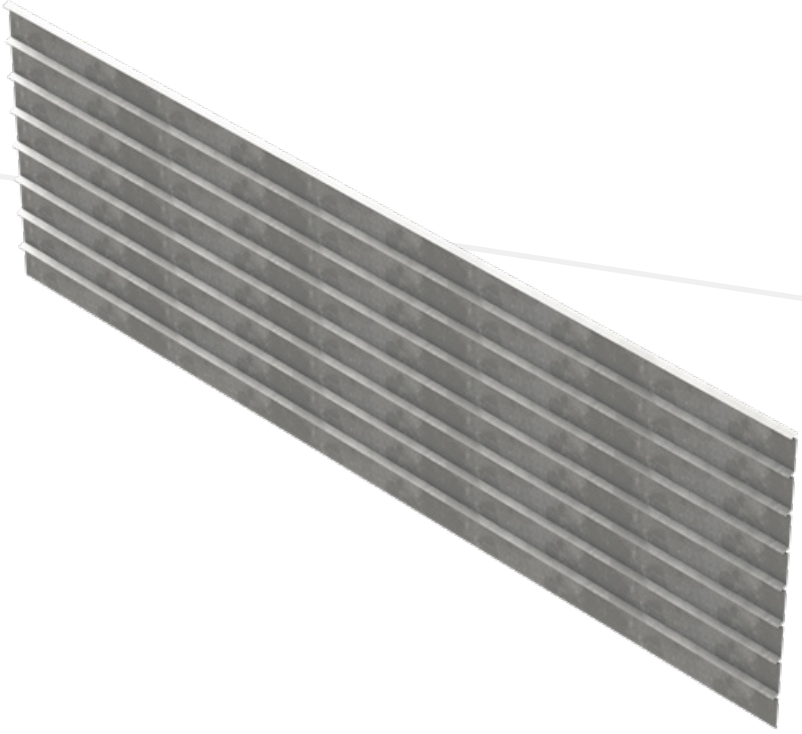
DESCRIPTION

Dayton Superior's A110 Metal Rib is the formwork solution for tough forming situations. Versatile enough for any type and size of structure, it can be cut in the field with tin snips and can be bent to form curves.



FEATURES & BENEFITS

- Lightweight sheets are easily cut and installed in the field, reducing labor costs
- Formwork is left in place, so no stripping of forms required —simply remove bracing
- Easily locate any penetrations in formwork
- Enables the pour to be visually monitored
- No need to clean, reface or oil formwork
- Can be used in applications ranging from pile caps and footings, to blind side walls and tunnels
- Concrete pours in 3 to 4 foot lifts are preferable with this forming system
- Can be used with Symons Steel-Ply (A46 Stayform) or job-built forms (A3 Stayform Tie)



PRODUCT DATA
