“SUPERTALL” SKYSCRAPER UNDERWAY IN TEXAS WITH THE SUPPORT OF SYMONS FORMING SYSTEMS (NO PUN INTENDED)

At the southwest corner of Cesar Chavez and Red River Streets in Downtown Austin, TX, a 3.3-acre property has been waiting for development for 20 years. The DPR Construction [Waller Creek Project](#) began over a year ago with the tower at the site being the first in the city to qualify as a ‘supertall’ skyscraper, the tallest in Austin, and even possibly the tallest building in the state of Texas.

Symons® was called in to assist with some difficult and large columns on the 1st, 14th and 41st floors. The customer was focused on a solution for the “Tea Pot” column. The Tea Pot column area is a large double battered column with an intersecting arm that protrudes and tapers away from the main stem. There are also 20 other uniquely shaped, large footprint, double battered 44’ tall columns on the project. DPR’s goal was to achieve a tieless “Class-A” finish on all columns. Symons Max-A-Form® STS was the solution on the 20 unique double battered columns, with the Tea Pot area requiring a combination of Max-A-Form STS and Symons Custom Forming Systems.

Our sales, engineering, field service and operations teams have worked diligently to provide solutions and deliver this project on time to meet the challenging schedule so DPR can complete the project on time. *This project is a prime example of what a top-performing team can accomplish when we all work together!*

MUST LOVE DOGS - MEET KARMAN

Karman is a Customer Service Representative in our Indianapolis location, having joined our Symons team back in 2009. As an avid dog lover, Karman and her husband have three of their own - two labs and a pit bull. They enjoy any activity involving their dogs, and love competing in dock diving, disc, and flyball.

She likes to travel, and explores new states when she gets the time. Also, she is a college basketball fan, rooting for the Butler Bulldogs. (Hmmm, we see another dog correlation!) Thank you for your dedication - we appreciate you, Karman!

THE MAGIC NUMBER '8' IN ORLANDO

The Orlando Bogy Creek Facility has been operating since 2011. It is centrally located on 8 acres in Orlando AND only 8 miles from the Orlando International Airport. They supply the state of Florida (as well as the Southeastern states region) with their forming needs.

The members of the Orlando team are there to serve you: Lori Longo (Branch Operations Manager), Mike Thibodeau (Inside Sales Representative), Chris Cavaliere (Customer Service Manager), Luke Meadows (Engineering), Danny Durazo and Dan Kloss (Sales Managers), and our hard-working Operations Team.

They provide a variety of equipment including light forming systems, shoring products, circular forms, bracing, and limited heavy forming options.

For more information on rental services in Orlando, please call 407-854-6193 or contact your Symons Representative.
