

Q *How many reuses in ABS plastic can I expect in my beds?*

A With proper care and jobsite management, you should expect ABS to provide 5-10.

Q *What processes do I follow if I need a custom design for a project? Pre-bid? When I have job and want to know if you can make a custom pattern, who should I call?*

A When a custom formliner is required for a job, you can contact your usual Dayton Superior or Symons representative with your needs for the job and any possible drawings. Your rep will work with our highly experienced formliner team to get you a quote, normally in just a few days.

Q *Will the liners react with colored concrete to cause staining?*

A No Dayton Superior formliners react with coloring compounds currently found in concrete.

Q *What is the recommended product to seal edges of liners to prevent concrete leakage.*

A A waterproof silicone caulk is best to seal up the edges of the formliner and should be reapplied every pour.

Q *Can you build reveals into the formliner pattern?*

A We can build anything into our formliners to assist in labor savings for the precaster.
