

## P77H DOUBLE TEE ANCHOR

The **P77H Double Tee Anchor** is a high-strength lifting anchor designed specifically for use within double tee concrete beams.

It utilizes an indent pattern that allows for tighter interfacing between the anchor and prestressed strands as well as secure anchorage into the concrete.

Ideal in double tees with web spans and strand patterns that are too tight for typical lifting anchors.

- Provides a **SAFER WORKING ENVIRONMENT** by eliminating steel failure and allowing for **GREATER RELIABILITY**
- Will fit around or between most typical single or double strand patterns, allowing for **EASY USE IN HIGH CONGESTION AREAS**

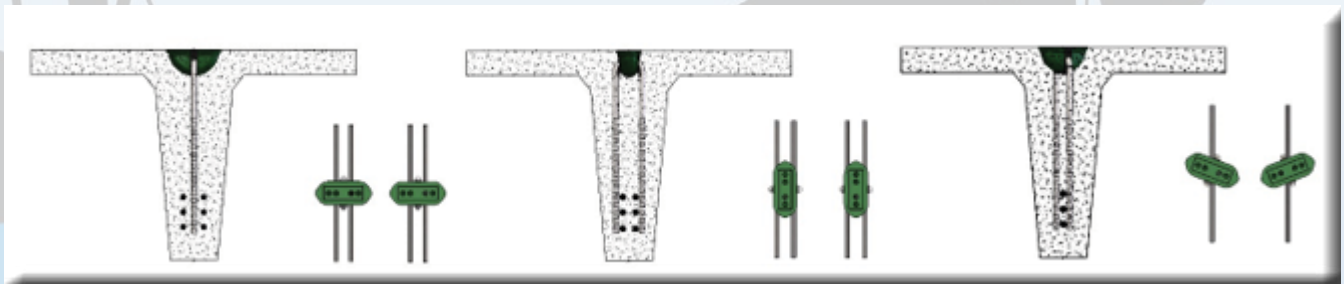

*Electrogalvanize finish per ASTM B633 available upon special request.*

P77H Details

- Slim design accommodates a wide range of web and strand applications
- Available in 18" (8T) and 23" (10T) options
- Pairs with existing P99 Void Former via two-piece adapter clip

*Shown above with related products - P77 Adapter Clips and P99 Reusable Void*
