

TECHNICAL DATA SHEET

DESCRIPTION

The Space-Lift Carriage Assembly consists of two main parts, The Base Tube and the Track Frame. The Base Tube provides support for the Track Frame and work platform and includes the Setting Pin. The Setting Pin, located at the front of the Carriage Assembly, engages a slot in the Jump Shoe and attaches the Space-Lift Assembly to the Jump Shoe. The Bump Nose provides alignment of the Setting Pin into the slot in the Jump Shoe. The Track Frame is permanently attached to the Base Tube and these two assemblies are shipped as the Carriage Assembly. The Base Tube has an Extension Attachment Foot which is used to attach the Space-Lift Frame Leg using ¾" diameter pins. The Base Tube has a Lift Lock which prevents possible up-lift of the units when in use. The Lift Lock is accessible from the work deck and is designed to be easy to check from this position.

The Track Frame is attached to the Base Tube by capturing it between its rollers. It has a Carriage Lock which allows the Track Frame to be locked any place along its allowable travel. This provides easy adjustment for the center of gravity when tying the units. The gear rack on the Track Frame has an attached tape measure on both sides to help workers prevent racking of the gang as it is moved forward or rearward. The Track Frame is moved via the Rack Adjustment Nut using a ratchet wrench and socket or an open end wrench.
